

Project Report

- **Platforms I Chose & Why**

As a first-year B.Tech CSE student at VIT Bhopal, I chose three platforms — GitHub, Kaggle, and LinkedIn — because each one serves a very different but equally important purpose in building my career in technology. Together, they help me learn, build, and connect.

- **GitHub**

Code & Projects

What it is: GitHub is where developers store and share their code. It acts like a live portfolio of everything you have built.

How I plan to use it: I will push every project, assignment, and experiment here — from small HTML pages to bigger Python projects — so that by Year 4, my profile shows real, consistent work.

- **Kaggle**

Data Science & AI Practice

What it is: Kaggle is a platform for learning data science, competing in machine learning challenges, and earning certifications. I have already earned the Python certification here. How I plan to use it: I plan to complete more courses in data analysis and ML, and slowly start participating in beginner competitions. By Year 3, I want to earn the 'Contributor' rank.

- **LinkedIn**

Professional Networking

What it is: LinkedIn is the world's largest professional network. It is where recruiters look, where opportunities are shared, and where your achievements become visible to the industry.

How I plan to use it: I will keep updating it with every certificate, project, and milestone. I have already built 135+ connections. By Year 4, I want it to reflect a strong, well-rounded profile that speaks for itself when I apply for internships and jobs.

✚ **My 4-Year Plan in Simple Words**

Year 1 is about building habits — posting regularly on GitHub, completing beginner courses on Kaggle, and staying active on LinkedIn. Year 2 is about going deeper — working on real projects and collaborating with others. Year 3 is about competing and contributing — Kaggle competitions, open-source contributions, and internship applications. Year 4 is about showcasing — having a complete portfolio that proves I am job-ready, not just degree-ready. These three platforms together are my digital identity. I want them to tell a story of someone who learned consistently, worked seriously, and grew with purpose.
