

PROJECT REPORT

DIGITAL LITERACY INFOGRAPHIC

I created my infographic using **Canva**, which is a simple and beginner-friendly design tool. It helped me easily arrange text, colours, and images to make my work look clean and attractive. My design covers three main topics:

- 1.What digital literacy is, useful digital tools for students, and safe internet practices. In the first section, I explained that digital literacy means using technology smartly, finding and sharing information, and staying safe online.
- 2.In the second part, I included tools like Google Docs, Canva, GitHub, and LinkedIn, which help students in studying, designing, coding, and building a professional profile.
- 3.In the last section, I added important safety tips such as using strong passwords, not sharing personal information, avoiding suspicious links, and enabling two-factor authentication.

One interesting thing I found while making this infographic was how important design and layout are in making information easy to understand. The only difficulty I faced was choosing the right colours and keeping the design simple without making it too crowded.
