Poor Digital Communication — A Real Problem

Imagine a team working on an urgent project. The manager sends a quick WhatsApp message saying, "Let's push the deadline." Half the team thinks this means the deadline is being extended — so they relax and slow down. The other half understands it as "let's push harder and finish early" — so they work overtime. Nobody asks for clarification because the message seems simple enough. On the due date, the project is half done, the client is angry, and the team is confused and frustrated with each other.

What Could Have Been Done Differently?

The manager should have written a clear, complete message — something like: "The new deadline is Friday, 5 PM. Please adjust your work accordingly." Even better, a short team call or a follow-up asking "Does everyone understand?" would have prevented the confusion. Good digital communication means being specific, not assuming the other person will guess your meaning. A few extra words can save hours of wasted effort and unnecessary conflict.
